

getting IT done!

We believe that we can bring value to your organization by leveraging and optimizing your existing business processes and infrastructure.

If there's a **BIG** gap between your budget and your needs, we'll help you close it. We will innovate and deliver smart solutions.

Express solutions, include:

Express Managed Services: allow you to transfer day-to-day management of IT functions. This means that you can have all the functionality you need with less budget, fewer resources and in less time than a traditional, in-house solution would take. The services are built specifically with mid-market needs in mind, so they are easy to understand, easy to implement, easy to manage and priced to fit mid-market budgets.

Services Express: helps make it simpler for people to work together and to be more productive, with ready-to-use and easy-to-customize team spaces where teams can create, edit, and share documents and information. This solution works with a variety of operating systems (including Linux ®) and runs on a single server. It comes pre-loaded with team space templates and list "portlets" so your teams and projects can get up and running, quickly. Built-in business instant messaging and a portal mean that it's a snap to extend collaboration to other people and business applications.

Financing Advantage- Low Rate Financing: You can qualify for lower than market rates on hardware, software and services on transactions as low as \$1,000 at a full range of lease terms of 24, 36, 48 or 60 months. With Low Rate Financing, monthly payments over a 36-month lease are less than the overall purchase price for the same equipment

We look forward to **getting IT done** for you, contact us today.
